

Armorflex

Articulating Concrete Block Revetment System

Armorflex is a flexible, interlocking matrix of concrete blocks of uniform size and weight connected by a series of cables which pass longitudinally through preformed ducts in each unit.

Resistant to wave attack

Prefabrication at works for fast site installation

Underwater installation possible

Economical and easy to handle

Advanced design – interlocking blocks and double-taper for greater strength

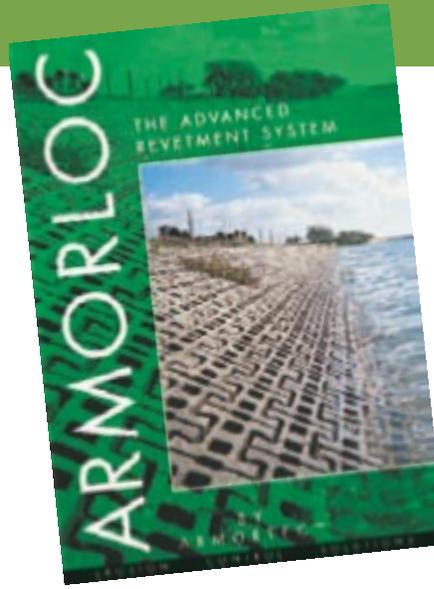

Different weights and sizes available for optimum design

Encourages plant growth – environmentally acceptable

Mats can be lifted and re-used

Resistant to frost

Armorloc

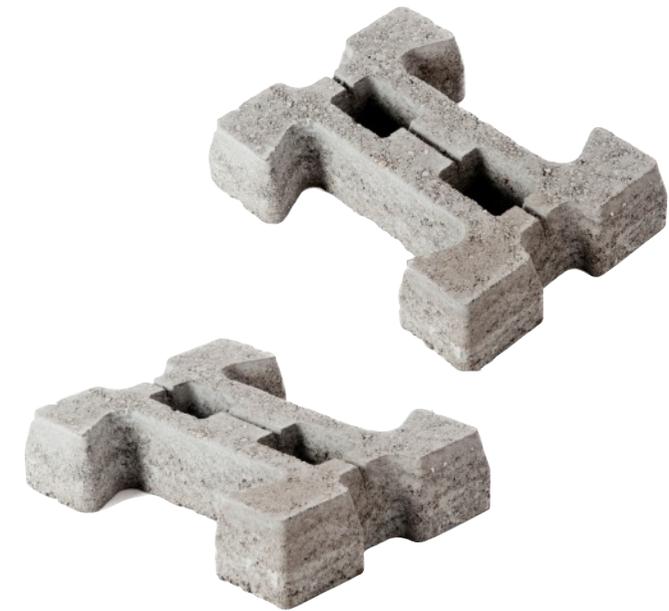

The Advanced Revetment System

A rugged concrete revetment system that is the proven solution for tough erosion control problems comprising of a machine made concrete block that will withstand the ravages of time and weather.

The ideal revetment for:

rivers, drainage channels, canals, marinas, boat ramps, secondary dam crests and spillways, small weirs and overflow channels, culvert and structure aprons, bridge abutment paving and other similar uses.

Pipeflex

Protection for Submerged Pipelines and Cables

This system is one of the most cost effective and manageable methods available that was principally developed for the protection of underwater pipelines and cables.
